REPLY UNDER 37 CFR 1.111

Sir:

This amendment is being filed in reply to the outstanding Office Action, mailed August 1, 2002, in connection with the above application. Please enter the following amendments:

In the specification:

◇◇ Please replace paragraph [0042] with the following:

A Those skilled in the art will readily recognize that the various genes introduced into endothelial cells, using either viral or non-viral methods, may be operably linked to control elements such as promoters and enhancers, that are capable of driving or repressing gene expression under appropriate conditions. Termination signals, such as polyadenylation sites, can also be included. Control elements, such as inducible promoters, that allow controlled expression of the gene of interest are available. For example, an ecdysone-inducible promoter can be utilized to regulate gene expression. (See, e.g., Statagene's; Complete Control™ Inducible Mammalian Expression System Instruction Manual – available online at
